## ABOUT FR HOPPER

FR Hopper is the biggest release of Faberfonts Foundry since its opening. The project started as a quest for cool and neutral thin sans capital forms and proportions more than a year ago. Till then lot of things have changed and have been added and the project have grown into a project as complex and prolonged as nothing else before here in the studio of Faberfonts.

FR Hopper is a sans based on geometric forms still having a friendly personality. It is intended for mid-length texts, captions, titles and almost any other occasional use - posters, flyers and even for web sites.

FR Hopper comes in 7 weights, 12 styles with 836 glyphs - that means 10 032 glyphs ready to use for your projects - and many advanced OT-features such as small caps, discretionary ligatures, alternate characters, fractions, arrows, ornaments and more - in all styles. It supports Extended Latin-A and Latin-B character sets and more than 100 languages.

Italics are based on carefully slanted roman versions but come with many cursive characters drawn from the ground up. It gives enough difference to the italics to stand out successfully from the romans - or attract by their own charm.

All the styles are hand-kerned carefully.

As two of the styles - FR Hopper 430 and 431 - comes as free fonts, you can download and test these before deciding to buy any other styles.

## FONT FAMILY FEATURES
